PROFESSIONAL SUMMARY

Business Intelligence Engineer (BIE) with **10+** years of experience solving enterprise-scale data problems, defining robust KPIs, and enabling data-driven decision-making across global operations. Proficient in **SQL, Python, PySpark, and AWS**, with expertise in designing scalable data models, building self-serve analytics, and supporting **AI/ML** initiatives. Skilled at cross-functional collaboration with engineering, product, and data science teams to optimize internal platforms, **improve operational efficiency, and ensure governance, compliance, and data quality**. Proven track record of shaping data strategy, automating reporting infrastructure, and driving measurable business impact at scale.

SKILLS

- Data Analysis
- Dashboard Design
- Consulting & Strategy
- Agile & Scrum Methods
- Apache Spark, Snowflake
- Tableau
- Power BI
- SQL
- Python
- Redshift
- Looker
- Regression
- A/B Testing
- AI/ML
- Data Integration
- Data Visualization
- Data Engineering
- Stakeholder Management
- Cross-functional collaboration
- Data Modeling

EXPERIENCE

Amazon, USA

Senior Analyst

Sep 2025 – Present

- Engineered BI solutions for Amazon's 3P global trade programs by creating standardized metrics, automated dashboards, and scalable reporting mechanisms used to monitor emerging risks and guide strategic interventions.
- Designed and implemented **SQL** and **PySpark** based data pipelines that unified disparate operational and logistics datasets, enabling visibility into global product flow and accurate identification of cross-border inventory patterns.
- Optimized large-scale data processing workflows, spanning billions of rows across global supply chain systems, to reduce compute cost, improve performance, and enhance data quality for downstream analytics.

Senior Business Analyst

Apr 2023 – Aug 2025

- Partnered with engineering, product and data science teams to define enterprise **KPIs** for fulfillment operations, supply chain, and patient safety, ensuring metric consistency and transparency across **Amazon Pharmacy**.
- Responsible for integrating multiple data sources to create denormalized tables and developing operational metrics and reporting dashboards using **Looker** and **QuickSight** to drive data-driven decision-making.
- Led the migration of datasets from **Snowflake to Redshift** by developing ETL workflows and transitioned reporting infrastructure from **Looker to QuickSight**, optimizing data accessibility and performance while **reducing infrastructure costs by \$1.4m annually**.
- Designed pre-aggregated metric tables to optimize QuickSight dashboards, reducing query latency and enabling scalable self-service analytics and **reducing manual reporting efforts by 40%**.
- **Built an AI-enabled self-service analytics tool** by documenting table schemas, defining join keys, and creating query templates; partnered with data engineering to **launch a GenAI agent** that converts natural language queries into SQL and insights, enabling self-served stakeholder deep dives.
- Collaborated with the data science team to develop forecast accuracy metrics to measure the performance of Amazon Pharmacy's inventory replenishment algorithms, enabling reduced stockouts.
- **Automated Weekly Business Review (WBR) metrics** using AWS Datanet pipelines, eliminating manual reporting, standardizing KPIs across teams.
- Ensured data governance and quality through validation processes to enhance accuracy, completeness, and compliance with regulatory requirements.

Amazon, USA

Business Analyst II

July 2021 – Mar 2023

- Defined and implemented Objectives and Key Results (OKRs) and Key Performance Indicators (KPIs) to optimize operational processes for inventory management, driving measurable improvements in performance and efficiency.
- Developed SQL logic to identify medications for cycle counting, establishing a SOX-compliant, randomized weekly cycle counting process to ensure inventory accuracy and regulatory compliance.
- Developed the aging inventory and overstock data model using data from multiple data sources to identify non-moving inventory and established and managed vendor returns process to avoid potential financial impact in inventory write-offs of **over \$5m per year**.
- Contributed to the product strategy to develop an inventory management tool for pharmacy by identifying operational and data gaps in the legacy systems; led the launch of the inventory platform across all Amazon Pharmacy fulfillment centers.
- Performed deep dives and built reports and dashboards to identify root causes for inventory inaccuracies; drove projects across the network to **reduce physical-virtual inaccuracy by 50% in 9 months**.
- Developed automated data pipelines to drive the collection of new data and the refinement of existing data sources to improve data quality.

Clarke Power Services, Cincinnati, USA

Product Manager

May 2018 – July 2021

- Improved repair technician efficiency by **60%** by developing digital inspection web application with mobile first design to digitize routine vehicle inspections.
- Ensured **~\$500k** savings in annual subscription and maintenance costs by shipping product features to replace legacy systems.
- Developed and implemented customer stratification model by regions based on customer buying power, loyalty, profitability and cost to serve. The model resulted in a new strategy for the service team to focus efforts on satisfying 20% of customers who bring 80% of revenue and the sales team to focus on opportunistic customers with potential to be core customers.
- Performed financial analysis of the fleet repair and maintenance software development project to calculate ROI of the project and developed a comprehensive product roadmap to deliver on business goals and received a commitment of **~\$1.5m** from the board and senior leadership to build an in-house fleet repair and maintenance platform.
- Drove **30% decrease** in fleet breakdown by establishing a process to track and schedule fleet Preventive Maintenance operations and led the development of the PM Scheduler tool to automate the process.
- Conceptualized and implemented product integrations with telematics providers such as Geotab and Samsara using APIs to get latest mileage, engine hours, MPG and fault codes to leverage sensor data from vehicles thereby enabling service managers to proactively manage customer's vehicles.

Mercedes Benz Research & Development India, Bangalore, India

Product Analyst

Aug 2012 – Jul 2016

- Managed multiple projects from concept to completion, including planning, setting team expectations, and ensuring timely delivery of project outputs.

EDUCATION

Syracuse University, Syracuse, NY

Aug 2016 – May 2018

MBA in Supply Chain Management

3.7 GPA

- Academic excellence awardee in Supply Chain Management

Bangalore University, Bangalore, India

Sep 2008 – Jun 2012

BE in Mechanical Engineering

CERTIFICATIONS

- [Certified Scrum Master](#) (Scrum Alliance)
- [Product Strategy](#) (Northwestern University)
- [Disruptive Strategy](#) (Harvard Business School Online)
